Topic and Project Question
Middle School Science
Mrs. Ruiz

Topic: At this point you should have been thinking about a science topic that you find interesting to you that you would like to know more about. Your goal is to come up with an original question to test. You may use science fair project websites as I have suggested to get ideas, but please try to come up with something that you want to test, so that you can create an original experiment.

You may NOT do your project on disposable diapers, paper towels, popcorn, or weapons of any kind.

You may NOT do a project which kills or harms any vertebrate animal, or which involves any type of explosive or poisonous materials.

You may NOT do a project you have done before UNLESS you are doing a two to three year study. That means you build upon your previous project by extending your test to something new, do not repeat.

The topic I would like to do my science fair project on _____.

Think of a question: Your question will drive your entire project. Make sure that your question is something that can be measured and answered by following the scientific process. You may use the project question for your project title.

Brainstorm a minimum of 2 and a maximum of 5 possible questions that you are interested in learning more about and list them neatly below and turn into teacher to get approval to begin your project.
